

# Using Code::Blocks in Windows

## Step 1-4 Get the correct Code::Blocks installer

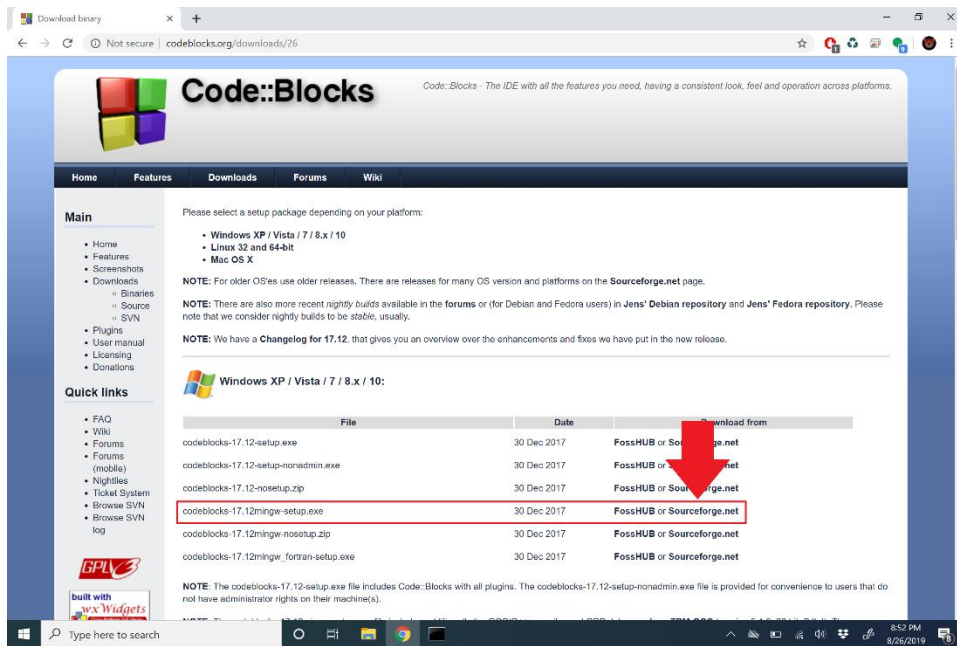

Step 1. Go to the download page we went to in class

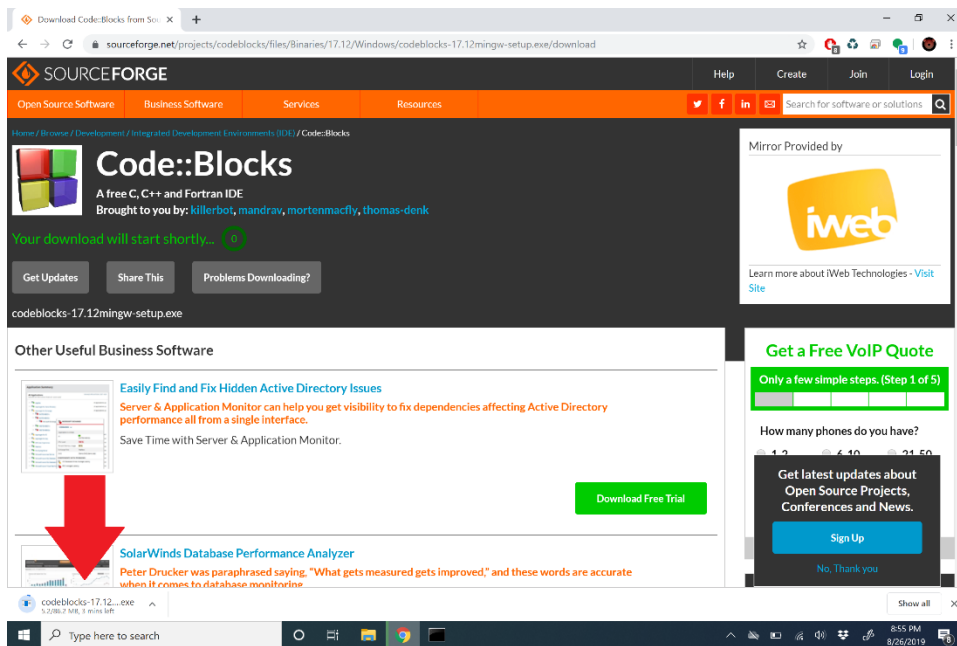

Step 2. Go the binaries

### Step 3. Get the one with mingw

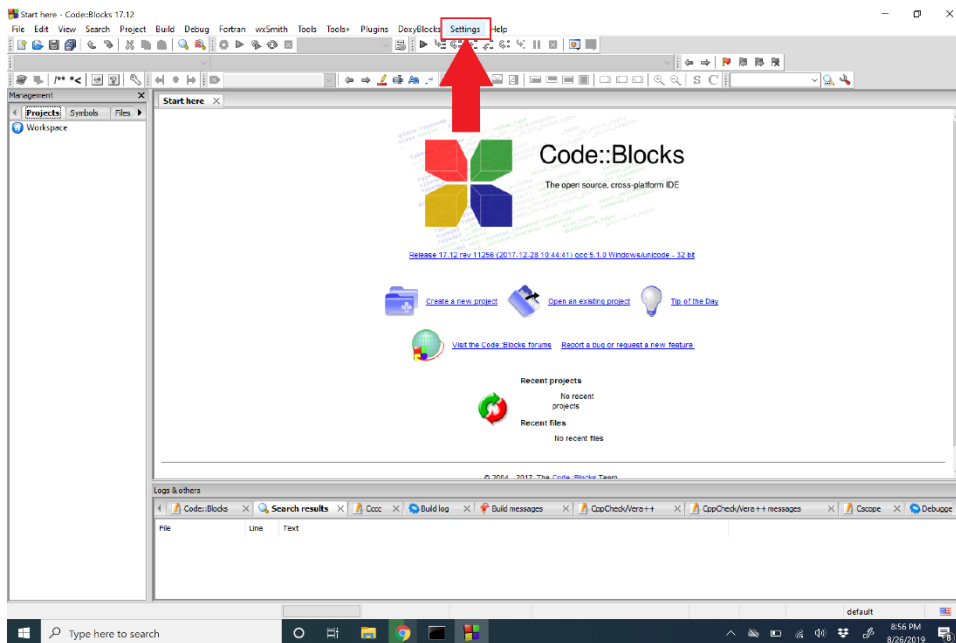

### Step 4. Wait for download and install the program normally

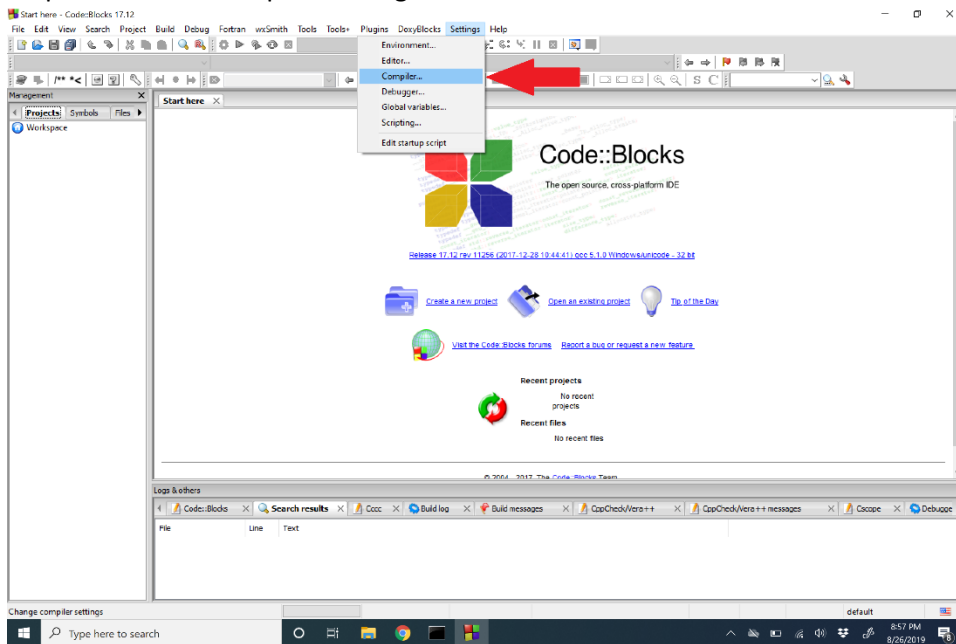

## Step 5-8 set up the compiler

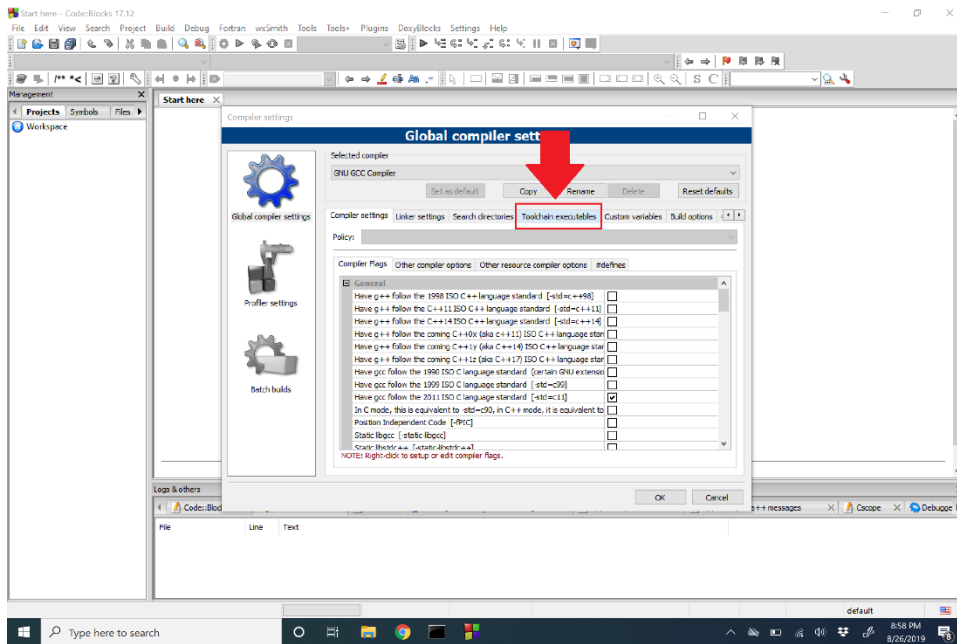

Step 5. Open Code::Blocks and click settings

Step 6. Go to the compiler settings.

Step 7. Click Toolchain executables.

Step 8. The path for the compiler is probably wrong so click auto-detect.
